

Licensing/Regulatory Information

All work must follow relevant laws and industry standards. Some tasks—such as installation, replacement, maintenance, and repair—can only be carried out by licensed professionals and may be outside the scope of this course. Licensing rules vary between states and territories, and completion of this course alone may not meet those requirements. It is the individual's responsibility to understand the regulations that apply to their role and ensure safe, compliant practices

Australian Fire Protection Licensing – State & Territory Directory

A simplified guide to the primary licensing regulators for fire-protection, inspection, testing, and fire-safety work across Australia.

Select your state or territory to view the governing authority and official licensing information.
